Sharon Dror

Test Automation Engineer

+972 54 620 9079 | sharondror@hotmail.com | LinkedIn | Portfolio

PROFESSIONAL PROFILE

Test Automation Engineer with 4+ years of experience designing automation infrastructure and building automated test suites for cloud applications. Focused on REST API test automation and framework design in TypeScript, with end-to-end UI coverage in Playwright, CI/CD integration, and validation in Kubernetes and cloud environments. Experienced in translating product and technical requirements into test strategies and reliable, maintainable automation.

TECHNICAL SKILLS

API Test Automation	REST API test automation, service integration testing, error and edge-case coverage, SQL data validation, regression testing
Automation Infrastructure	Framework and infrastructure design, reusable API clients, test simulators and utilities, shared helpers, test planning and strategy, flakiness reduction
UI Automation	Playwright, page objects and reusable components, hooks and fixtures, resilient locators and waits, cross-browser execution, trace-based debugging
Languages	TypeScript, JavaScript, Python, C, C++
CI/CD & Cloud	GitHub Actions, Jenkins, Kubernetes, AWS, GCP
Tools & Platforms	ReportPortal, Jira, Git / GitHub
AI-Assisted Development	GitHub Copilot, Claude Code, OpenAI Codex, Augment; building and using agent skills and custom instructions for repeatable workflows

PROFESSIONAL EXPERIENCE

Redis | Automation Developer — Aug 2022 – Present · Tel Aviv

- Lead test automation for the Cloud product team, working in two-week Agile sprints.
- Design and build the team's automation infrastructure in TypeScript: reusable API clients, shared helpers, and test utilities used across the entire test suite.
- Develop and maintain REST API automated tests in TypeScript — service behavior, cross-service integration flows, error and edge-case paths, and regression coverage; the team's primary automation focus.
- Developed simulators for third-party services that could not be tested against directly, enabling reliable end-to-end coverage.
- Build UI end-to-end automation with Playwright — page objects and reusable components, hooks and fixtures, resilient locators and waits, cross-browser execution, and trace-based debugging.
- Translate HLD/PRD requirements into test strategy, test plans, and automation implementation plans with product and engineering partners.
- Own daily and nightly CI in GitHub Actions and Jenkins — triage nightly failures in ReportPortal and drive technical-debt work to improve suite reliability and runtime.
- Validate application behavior in Kubernetes and use SQL for test data validation and troubleshooting; contribute to code reviews and automation standards.
- Apply AI-assisted development tools (GitHub Copilot, Claude Code, OpenAI Codex, Augment) to accelerate implementation, including building agent skills for repeatable workflows.

OrboGraph | Quality Assurance Tester — Oct 2019 – Apr 2022

- Owned creation and maintenance of the product's Windows installers using WiX (Windows Installer XML).
- Automated installer execution and validation across AWS EC2 and GCP virtual machines, and maintained those cloud environments.
- Wrote scripts to automate and accelerate recurring day-to-day engineering workflows.
- Performed on-premises software upgrades at customer sites.
- Delivered installer packages to the North America customer success team and trained them on installation procedures.
- Performed functional and regression testing and worked with developers to resolve defects and improve product quality.

Helicon Books | Junior PHP Developer — Mar 2016 – Mar 2017

- Developed bookstore websites, landing pages, and customer-facing web applications.

EDUCATION & TRAINING

Experis Software | Software Development Program, C/C++ — 2017 – 2018

Intensive software development training and internship.

Tel Aviv University | B.A., Film Studies — 2010 – 2014
