Sharon Dror

Test Automation Engineer

+972 54 620 9079 | sharondror@hotmail.com | LinkedIn | Portfolio

PROFESSIONAL PROFILE

Test Automation Engineer with 4+ years of experience building automated test suites for cloud applications. Focused on REST API and UI testing with TypeScript and Playwright, delivering end-to-end coverage integrated into CI/CD. Experienced in translating product and technical requirements into test strategies and reliable, maintainable automation. Use AI tools such as Augment, OpenAI Codex, and Claude Code daily to save time.

TECHNICAL SKILLS

API Testing	REST API test automation in TypeScript with Playwright, API testing with Postman, SQL data validation, regression testing
Test Automation Practices	Reusable API clients, shared helpers and utilities, third-party service simulators, test planning and strategy, flakiness reduction
UI Automation	Playwright, page objects and reusable components, resilient locators and waits, trace-based debugging
Languages	TypeScript, JavaScript, Python, C, C++
CI/CD & Environments	GitHub Actions, Jenkins, Kubernetes, AWS, GCP
Tools & Platforms	ReportPortal, Jira, Git / GitHub
AI Tools & Agents	Augment, OpenAI Codex, Claude Code, GitHub Copilot. Building and using agent skills and custom instructions for repeatable workflows

PROFESSIONAL EXPERIENCE

Redis | Automation Developer — Aug 2022 – Sep 2026 · Tel Aviv

- Led test automation in the Cloud product's integration scrum, covering cloud marketplace and PaaS integrations, in two-week sprints. Approved the scrum's release each sprint.
- Developed and maintained REST API automated tests in TypeScript with Playwright, covering service behavior, end-to-end API flows across services, negative and edge cases, and regression. API testing with Postman.
- Built UI end-to-end automation with Playwright using page objects, reusable components, resilient locators and waits, and trace-based debugging.
- Built reusable API clients, shared helpers, test utilities, and simulators for third-party services that could not be tested directly, enabling end-to-end coverage.
- Owned the health of the team's suite of 150–200 tests: removed duplicate cases, optimized tests to reduce execution time, and converted UI tests to API tests.
- Translated HLD/PRD requirements into test strategy, test plans, and automation plans with product and engineering partners.
- Owned daily and nightly CI runs in GitHub Actions and Jenkins. Triaged nightly failures in ReportPortal and drove technical-debt work to improve suite reliability and runtime.
- Validated application behavior in Kubernetes environments and used SQL for test data validation and troubleshooting. Contributed to code reviews and automation standards.
- Used AI tools (Augment, OpenAI Codex, Claude Code) to review Jira tickets, design and implement tests, review code, and debug failures through log analysis, root-cause investigation, and bug tickets.

OrboGraph | Quality Assurance Tester — Oct 2019 – Apr 2022

- Tested the accuracy of the product's AI models for reading checks, and performed performance testing of throughput and latency.
- Developed and maintained the product's Windows installers using WiX (Windows Installer XML).
- Automated installer execution and validation on GPU virtual machines in AWS EC2 and GCP. Specified the machine configurations and installed the prerequisites.
- Wrote Python and Bash scripts to automate recurring engineering workflows.
- Performed on-site installations and upgrades at customer sites. Analyzed logs and reproduced issues on site. Trained the North America customer success team on installation procedures.

Helicon Books | Junior PHP Developer — Mar 2016 – Mar 2017

- Developed bookstore websites, landing pages, and customer-facing web applications.

EDUCATION & TRAINING

Experis Software | Software Development Program, C/C++ — 2017 – 2018

Intensive software development training and internship.

Tel Aviv University | B.A., Film Studies — 2010 – 2014
